

DMX Booster / Splitter IP68

DMX signal is the key point of controllable nozzles. However it has some limitations. The signal support limited number of device which is MAX 32 and also other disturbing environment factors can cause damage on the signal. DMX BOOSTERS use to strengthen the DMX signals or split the signal into two new DMX lines, so each new signal can control the units which are located different zones. In additionally, all DMXBOOSTERS are optical and galvanic isolated. DMX Booster / Splitter are suitable to use underwater.
