## DMX REPEATER PRODUCT NO : 5241

Effective management of fountain equipment depends on the quality of your data signal. Cable length, socket contact, and other external factors can impact signal efficiency and cause interferences. To reduce these negative effects, the data signal needs to be amplified. With the Aquatronic DMX Repeater, it is possible to have six separate output data lines from one input data line. The DMX signal repeater, which is mounted on the rail, also provides isolation for the signal.

- ✓ POWER IN : 24 VDC
- ✓ OUT PUT : 6 DMX (isolated)
- ✓ Rail-Mounted
